

Valheim Mod Setup

One-time install, about 10 minutes. After this, playing modded is a single click.

You need: Valheim on **Steam** (PC only; the Xbox / Game Pass version does not support mods). Everything else is free and takes a few clicks.

Step 1: Install the mod manager

1. In a browser, go to **valheim.thunderstore.io** and click "**Get Manager**" at the top of the page. This downloads **r2modman**, the standard Valheim mod manager.
2. Run the downloaded installer, then open r2modman.
3. It asks which game to manage: search **Valheim**, click it, then click **Select game**.
4. On the profile screen, click **Create new**, name it (e.g. **Modded**), and select it.

Mods live inside this profile only. Launching Valheim normally through Steam stays 100% vanilla; nothing about your regular game changes.

Step 2: Install ChestButler

1. With your profile selected, open the **Online** tab.
2. Search for **ChestButler** and click **Install**. All required mods (BepInEx, Jotunn, MultiUserChest) install automatically with it.

Alternative: if you were given a profile code instead, use Import / Update, then Import new profile, then From code, and paste it.

Step 3: Launch and verify

1. In r2modman click **Start modded** (big button, top-left). **Always launch through this button**. Starting from Steam launches without mods.
2. Load into any world and open a chest: if you see small extra buttons (**Sorter**, **Pin**) under the chest panel, everything works.

If something goes wrong

Problem	Fix
Server says "Incompatible version"	You launched from Steam instead of Start modded , or your mods are outdated. Update ChestButler in the manager (or re-import the newest profile code).
A dialog lists missing or mismatched mods	That dialog is intentional and names exactly what to fix. Install or update the listed mod.
No extra buttons on chests	Mods did not load: wrong profile selected in r2modman, or you did not launch via Start modded.

Valheim updated and modded launch breaks	Do not update or change mods yourself; versions must match the server exactly. Ping the server admin and wait for the all-clear.
I am on Xbox / Game Pass	Not supported. Mods require the Steam version.
